JAI RAI*

PROBLEM 01

30–40% of fresh fruits & vegetables are discarded daily at local mandis and vendor stalls due to cosmetic blemishes, over-ripeness, and surplus — causing direct inventory losses for small vendors and massive food waste across the supply chain.

PROBLEM 02

Urban and semi-urban women lack access to flexible micro-enterprise opportunities, while discarded organic produce dumped in landfills generates harmful methane emissions — deepening both social inequality and the climate crisis.

Problem Statement

India wastes over ₹92,000 crore worth of food annually. At the grassroots level, small vendors lose 15–20% of monthly income to unsellable but edible produce. Meanwhile, millions of women remain excluded from formal economic participation. This dual crisis — perishable loss and livelihood deprivation — forms the root cause that Project Amulya directly addresses through circular upcycling and community empowerment.

Our Product Portfolio

100% Circular Model

Every rescued kilogram of perishable produce is transformed into premium, clean-label consumer foods — zero landfill, zero waste. Our fourth product line: natural fruit gummies & jellies made from upcycled pulp, available in snack packs at ₹25 MRP.

All four product families are women-led, community-produced, and sustainably packaged — turning surplus into nutrition and livelihoods.

BAKED CHIPS

Rescued sweet potato & mixed fruit chips — baked, not fried. Zero artificial additives, clean-label snacking from cosmetically imperfect but nutritionally intact produce. Available in 25g & 50g kraft pouches at ₹20–₹30 MRP.

ARTISANAL JAMS & JUICES

Handcrafted berry preserves & cold-pressed fruit blends — upcycled from surplus orchard yields. No added preservatives. Packaged in recycled glass jars (120g) at ₹100–₹120 MRP and 150ml RPET bottles at ₹40 MRP.

JELLIES/GUMMIES

Crafted from rescued surplus fruits to reduce food waste. Free from added preservatives, packaged in eco-friendly single-serve sachets, and priced affordably at ₹25 MRP.

Operational Pipeline

STEP 01

Fair-trade rescue & sourcing from wholesale mandis and vendor clusters at value-recovery rates. Surplus perishables — cosmetically imperfect or over-ripe — are procured affordably, reducing vendor losses and preventing landfill dumping at the source.

STEP 02

Three-tier segregation: Edible-grade → direct processing; Processing-grade → transformation into chips, jams & juices; Compost-grade → organic waste diversion. Followed by hygienic washing, sorting and preparation in controlled environments.

STEP 03

Women-led home and NGO-partnered community kitchens handle all value-addition: dehydration, preserve-making, cold-pressing and gummy production. SHG collectives earn sustainable stipends with certified food-processing and micro-accounting skills.

STEP 04

Eco-packaging: food-grade kraft barrier pouches ₹5–₹6/unit, recycled glass jars ₹11/unit, RPET bottles. Hybrid distribution via campus canteens, fest stalls and student reseller micro-franchises offering 25–40% partner margins.

Business Model & Unit Economics

~58%

Avg. Gross Margin across all SKUs.

- Juices: ₹15–18 cost
→ ₹40 MRP.
- Chips: ₹8–10 cost
→ ₹20–30 MRP.
- Jams: ₹45–50 cost
→ ₹100–120 MRP.
- Gummies: ₹9–11 cost
→ ₹25 MRP.

Cost Composition per Unit:

Raw Surplus Sourcing 20% | SHG & Community Labor 35% |
Eco-Packaging & Quality Sealing 25% | Logistics, FSSAI
Compliance & Overheads 20%.

Labor-first model ensures maximum livelihood impact while maintaining strong commercial margins across all four product families.

Measurable Impact

5 SDGs

20%

Monthly income recovery for small vendors on previously discarded surplus stock — direct livelihood restoration at source.

Zero Hunger

Gender Equality

Decent Work &
Economic Growth

Responsible
Consumption &
production

- Women Empowerment: Sustainable stipends + certified skills in food processing, packaging & micro-accounting for SHG members.
- Landfill Diversion: Metric tons of organic produce rescued per operational cycle, cutting methane emissions.
- Vendor Livelihood: 15–20% monthly income recovery on discarded inventory, restoring dignity and financial stability to mandi vendors.

Strategic Timeline & Scale-Up

Q2 2026

Foundation & Compliance: Secure FSSAI licensing and food safety certifications. Conduct shelf-life and nutrient testing. Launch NGO-partnered community kitchen pilots with SHG women onboarding.

Q4 2026

Standardization & Automation: Introduce semi-automation for dehydration and vacuum sealing. Upgrade premium repackaging lines. Strengthen quality control and supply chain consistency.

Q3 2026

Commercial Launch: Roll out across campus canteens and institutional pop-ups. Activate student reseller micro-franchise networks with 25–40% partner margins. Begin brand visibility drive.

Q1–Q2 2027

Enterprise Expansion: Launch B2B sustainable gifting hampers for corporates and events. Scale multi-college micro-franchise rollouts. Establish decentralized food-processing hubs across Delhi NCR.
